

We help designers and manufacturers

- Reduce design cycle time
- Minimize customer product returns
- Maximize product yields

Failure Analysis Materials Analysis Reliability Testing Teardown Analysis

Hello everyone. The holidays are coming fast and soon we'll be focussing on our social life. Maybe we can have one this year! We'd like to take this opportunity to wish everyone happy and safe holidays.

Meanwhile we have been busy acquiring new equipment: a 2-m integrating sphere for LED reliability testing, a 1050-nm laser for our Laser Scanning Microscope and a new temperature-humidity chamber.

You can only guess the fun we had bringing the sphere inside.

Courses

We do have two half-day training courses available. We will deliver them remotely. Please contact us to get the outlines and to make arrangements if you are interested.

Each course is offered to companies for a flat rate, for five attendees or more. Individuals can apply and a suitable time will be arranged when five requests have been received.

Failure Analysis of Electronic Devices

This half-day course will benefit design engineers, component engineers, and quality engineers who may not be familiar with the physics behind FA tools available to them, internally or externally, to resolve their customer returns or supplier quality issues.

Shining a light on LED technology: construction, reliability, qualification, failure modes

This half-day course will benefit design engineers, component engineers, quality engineers and patent lawyers who may not be familiar with the physics, internal structure and reliability issues of LEDs as components.
