

We help designers and manufacturers

- Reduce design cycle time
- Minimize customer product returns
- Maximize product yields

Failure Analysis Materials Analysis Reliability Testing Teardown Analysis

Hello everyone. As we start coming out of hibernation, it's time to look at the coming events.

We plan to be at the [Ontario Expo & Tech Forum](#), a one day event to be held on June 11 in Vaughan. Please join us.

We have a few short training videos on YouTube. Each is no longer than 5 minutes.

Recognizing solderability failures
Recognizing wirebond failures
IP and Patent Lawyer video
LED services video
Recognizing counterfeit electronics parts Part 1
Recognizing counterfeit electronics parts part 2
LED Failure Mechanisms
Scanning Acoustic Microscopy

Do you know MuAnalysis offers [Reliability testing?](#)

Courses

We do have two half-day training courses available. We will deliver them remotely. Please contact us to get the outlines and to make arrangements if you are interested.

Each course is offered to companies for a flat rate, for five attendees or more. Individuals can apply and a suitable time will be arranged when five requests have been received.

Failure Analysis of Electronic Devices

This half-day course will benefit design engineers, component engineers, and quality engineers who may not be familiar with the physics behind FA tools available to them, internally or externally, to resolve their customer returns or supplier quality issues.

Shining a light on LED technology: construction, reliability, qualification, failure modes

This half-day course will benefit design engineers, component engineers, quality engineers and patent lawyers who may not be familiar with the physics, internal structure and reliability issues of LEDs as components.
